

Horizontal Split Case Fire Pump Series 4600F - 60 Hz

Water-Based Fire Suppression System

SOLUTION OUTLINE

FILE NO: F46.11
DATE: SEPTEMBER 2024

SUPERSEDES: F46.11
DATE: DECEMBER 2022

The Armstrong Series 4600F represents the state of the art in Horizontal Split Case pumps, meeting or exceeding the requirements of NFPA as well as fire protection testing laboratories such as UL, ULC and FM.

The compact pump design and reduced footprint make the 4600F perfectly suited for use in new construction, packaged fire systems and retrofit installations.

SAVES INSTALLATION COSTS AND LIFECYCLE COSTS

Industry-leading, high-efficiency pump designs require smaller driver selections, which in turn require smaller controllers. Smaller drivers and controllers draw less power, so they can be supported by lower-rated electrical components. All these factors contribute to reduced equipment cost.

At critical duties Armstrong hsc 4600 models installed offer cost savings of up to 20%.

LOWER INSTALLED COST

DURABILITY

Oversized stainless steel shaft is rated for minimum 5000 run hours

Double suction impeller prevents wear due to imbalanced flow

Sealed, permanently-greased bearings prevent seizing

Externally mounted combination bearing and seal housing minimizes shaft deflection

EASY MAINTENANCE

Fitted with drain connection for drip containment

Replaceable case wear rings – locked to prevent rotation or axial displacement

Hydraulically balanced double suction impeller minimizes axial thrust

Three-piece split gland shaft sealing

Replaceable shaft sleeves

ARMSTRONG HSC 4600F FIRE PUMPS – 60Hz

Performance Selection Chart

■ 1800 rpm
 ■ 3600 rpm
 ■ Coming soon
 Also available with diesel drive at various speeds

web-based sizing and selection software makes it easy to choose the Armstrong fire pump that's right for your building project. All supporting literature, performance curves, 3D CAD files and Revit models are available for download.

CONTRACTOR FRIENDLY

The contractor-friendly design approach means easy access for repair, easy replacement of bearings, and flexibility on installation. If needed, the pump can be reversed from the left-hand to right-hand drive at the site.

The innovative 3-piece gland seal packing design means that the packing can be changed without removing the rotating assembly

The Armstrong 4600F leads the industry with its Tilted-parting casing design that places suction and discharge on the same center line. This makes it easy for contractors to install piping in advance of the pump delivery, which can compress construction schedules and reduce labor.

The pump shafts and all related parts are identical for left and right-hand drive configurations. This means the 4600F can be reconfigured on-site to rotate in the opposite direction, if needed.

Lastly, with a small overall footprint, there's plenty of space around the pump to make installation, commissioning and maintenance easier.

Contractors can save time and minimize costs with features that reduce maintenance

Tilted-parting casing design – rotating element can be removed without disturbing piping

Ergonomic design of stuffing box extension

Removable bearing housing – without removing top casing

Readily available spare parts kits
